ONNOY INDEPENDENT JUDGEMENT

Not sure what to study?

Let's help you decide. Step by step.

A mentor's workbook to help students in Class 9–12 decide which field of study to choose.

কী পড়ব? — এর একটাই সঠিক উত্তর নেই। আছে সঠিকভাবে ভাবার একটা পথ।

20 pages · about 25 minutes

onnoy.vercel.app

How to use this workbook.

This workbook won't tell you which subject to choose. It will show you how to decide well, so that whatever the result, you'll be okay. Read it start to finish, or keep it and return to one page at a time. The blank boxes are yours to write in — a pen works better than a phone here.

PART 1 · MINDSET

The voices in your head 3

Control the way you decide 4

A field is a door, not a destiny 5

PART 2 · KNOW YOURSELF

Three honest questions 6

The real-world limits 7

PART 3 · EXPLORE

Field snapshot — what fields exist 8–9

Which group opens which doors 10

Four roads, none is "the best" 11

Who is giving you this advice? 12

AI can help you think 13

Ask better questions 14

A small taste before a four-year meal 15

PART 4 · DECIDE

Plan A, B and C 16

Your decision sheet (fill it in) 17

Whatever the result, you'll be okay 18

Your next seven days 19

Words you'll hear, and where to check 20

First, the voices in your head.

লোকে কী বলবে?
What will people say?

ভুল সাবজেক্ট নিলে সব শেষ!
If I pick wrong, everything is ruined.

চান্স না পেলে কী হবে?
What if I don't get a seat?

খরচ চালাতে পারব তো?
Can we afford this?

সবাই তো একই দিকে যাচ্ছে...
Everyone else seems to be going the same way.

Almost every student in Bangladesh hears these voices.

THINK LIKE THIS →
Being confused means you take your future seriously. Stay with the question.

You can't control the result. You can control how you decide.

Not in your hands

- Number of seats
- Cut-off marks
- Result day
- What people say

In your hands

- The facts you collect
- The people you ask
- The plans you make
- How you respond

One thing from “In your hands” I'll act on this week:

_____

THINK LIKE THIS →

Good information and a backup plan make a good decision — even if the result still surprises you.

A field is a door, not a destiny.

A few careers need one exact degree — doctor, engineer, lawyer. Most don't. One degree can lead to many roads:

- **Government service**
- **NGO & development**
- **Teaching & research**
- **Banking & business**
- **Media & writing**
- **Your own venture**

⚠ Many government posts, including BCS general cadres, are open to graduates of many subjects — not just one. Always read the actual circular before assuming a door is closed.

One door I want to keep open, whatever I choose:

_____

Why it matters to me: _____

THINK LIKE THIS →

Don't ask "Which subject is best?" Ask "Which one keeps the most good doors open for someone like me?"

Three honest questions.

1 · What do I enjoy?

What do you read, watch or try without anyone telling you to?

2 · What am I good at?

Your marks, yes. Also what friends ask your help with.

3 · What work suits me?

Working with people, numbers, ideas, or your hands?

Watch out: a senior's or cousin's choice fits *them* — but it might not automatically fit you too.

Your three answers — you'll need them again on page 8

1 · I enjoy _____

2 · I'm good at _____

3 · I work best with _____

THINK LIKE THIS →

Choose what fits you, not what fits the trend.

Now, the real-world limits.

Money

Add up the whole degree: fees, books, food, travel or hostel. Ask for the total in writing.

Place

Near home or away? Travel, rent and safety change the cost and the comfort.

Time

How long will it really take? Ask seniors about session delays.

Family

Does anyone depend on you earning soon? Be honest about it.

The limit I need to plan around most, right now:

THINK LIKE THIS →

Limits don't shrink your future. They shape your route. Plan inside them, then stretch them step by step.

What are the fields, really? (1 of 2)

Engineering & Technology

Civil, Electrical, Mechanical, CSE, Textile & more

Designing, building and fixing the systems around us.

Might fit you if: you enjoy maths, physics, and how-things-work problems.

Medical & Health Sciences

MBBS, BDS, Nursing, Pharmacy, Public Health

Long, demanding study that leads to caring for people directly.

Might fit you if: biology draws you in, and you have patience for a long road.

Pure & Applied Sciences

Physics, Chemistry, Mathematics, Statistics, Environment

Understanding why things happen, often through research.

Might fit you if: you ask "why" more often than "what."

Information Technology

Computer Science, Software Engineering, IT

Building the apps, sites and systems we all use daily.

Might fit you if: you like logic, puzzles, building step by step.

Agriculture & Environment

Agriculture, Fisheries, Forestry, Food Science

Working with land, food and nature — vital for Bangladesh.

Might fit you if: you care about farming, food, or climate.

What are the fields, really? (2 of 2)

Business & Finance

BBA, Accounting, Economics, Finance

Organising money, people and ideas to build something.

Might fit you if: you like numbers, planning, or leading a team.

Social Sciences & Development

Social Development, Sociology, Political Science, Public Admin

Understanding society, and working to improve it.

Might fit you if: you want to work directly with people and communities.

Law

LLB and related study

Reading closely, arguing fairly, understanding rules.

Might fit you if: you enjoy debate and have an eye for fairness.

Arts, Media & Communication

Journalism, Mass Comm, Fine Arts, Film, Music

Telling stories and creating things people feel.

Might fit you if: you enjoy writing, designing, or performing.

Education

Teaching-focused degrees and training

Teaching and explaining, shaping how others learn.

Might fit you if: you're patient, and enjoy helping people understand.

THINK LIKE THIS →

This list isn't complete, but it's a start. Circle two or three that sound like you, and match them against your answers on page 6.

Which group opens which doors?

Your HSC group (Science, Commerce or Humanities) affects what you can apply for — but rules differ by university, and some doors stay open across groups.

Science group

Usually open: Engineering, Medical, Pure Science, IT/CSE, Agriculture
Often open too: Business, Social Science, some Arts programmes

Commerce group

Usually open: Business & Finance — BBA, Accounting, Economics
Often open too: Social Science, some Arts, some general programmes
Rarely open: Engineering, Medical

Humanities / Arts group

Usually open: Law, Social Science, Arts & Media, Education
Often open too: Some Business and general programmes
Rarely open: Engineering, Medical

⚠ Public admission isn't one single test: most general universities share a common cluster test; engineering and agriculture each run their own cluster; medical has its own exam; and some large universities test separately. Confirm on the exact official website — rules change.

THINK LIKE THIS →

Your group is a strong starting point, not a locked gate. If you want to cross over, check the exact eligibility rule before assuming either way.

Four roads. None is “the best.”

Public university

- Low fees
- Strong, respected names
- Very competitive — apply to more than one

Private university

- More seats available
- Higher fees
- Check UGC approval & scholarships

National University

- Colleges in many towns
- Low fees
- Quality varies — check teachers & delays

Study abroad

- Big doors, big costs
- Needs English tests & a money plan
- Be careful with agents

Other real doors: polytechnic diploma · nursing & health technology · open university · skills training

THINK LIKE THIS →

Ask which road fits you, and what it needs from you.

Who is giving you this advice?

Official website, UGC, govt. circular — STRONGEST

Seniors and relatives (one person's story)

YouTube guru or Facebook group

Coaching-centre advertisement

Viral post or screenshot — WEAKEST

⚠ Red flags

- "Guaranteed seat!"
- Money to a personal bKash or Nagad number
- "Last chance" admission link on Messenger

The last big admission claim I saw — where did it actually come from?

THINK LIKE THIS →

Advice is only as good as its source. Confirm important facts on official sites.

AI can help you think. It can't decide for you.

✓ Good uses

- Brainstorm careers you haven't heard of
- Explain a subject simply
- Draft questions for a senior

⚠ Be careful

- Fees/cut-offs/dates can sound sure and be wrong or old
- It doesn't know your family or the latest circular
- Never share ID, phone or bKash details

CHECK ANYTHING IMPORTANT WITH SIFT

S	I	F	T
Stop	Investigate the source	Find better coverage	Trace to the original

One thing I'll ask AI to help me with this week:

THINK LIKE THIS →

AI widens your ideas. Official sources confirm your facts. You make the decision.

Ask better questions.

When you talk to a senior or someone already working in a field, swap the vague question for one that gets a real answer:

✗ TOO VAGE

~~Is this subject good?~~

✓ ASK THIS INSTEAD

What does a normal week look like for you?

✗ TOO VAGE

~~Will I get a job?~~

✓ ASK THIS INSTEAD

What helped you get started, besides the degree?

✗ TOO VAGE

~~Which one is better?~~

✓ ASK THIS INSTEAD

What do you wish you'd known before choosing?

Ask: a teacher who knows you, a senior, someone working in that job, the admission office.

Talking to parents? Their worry usually means "we want you safe." Show them Plans A, B, C and total costs, not just your dream.

Someone I'll ask this week, and what I'll ask them:

THINK LIKE THIS →

Good questions get you real stories, not just opinions.

Try a small taste before a four-year meal.

1	Read the syllabus. It shows what you'll really study.	30 min
2	Visit the campus or college. Sit in a class if you can.	1 day
3	Talk to one senior and one person working in that field.	2 chats
4	Try it: a free online lesson, a small project, or volunteering.	1 week
5	Notice your energy. Did time fly, or did it drag?	Always

The test I'll try first, and when:

THINK LIKE THIS →

Small tests are cheap. A wrong four-year choice is expensive.

Don't bet everything on one seat.

A **Your first choice**
The goal that excites you and still makes sense.

B **A good option**
One you'd be happy with if A doesn't happen.

C **A safe option**
Keeps you moving and learning while you try again.

Set a switch date. "If Plan A isn't confirmed by _____ I move to Plan B." Apply to more than one road — deadlines differ.

Write your plans

A _____

B _____

C _____

THINK LIKE THIS →

Having a backup plan doesn't mean you doubt yourself. It means you're being smart.

Put your options side by side.

Write up to three options above the columns. Tick each box: ✓ yes · ? not sure · × no.

Leads toward my goal			
I'd stay interested			
Affordable in total			
Keeps doors open			
I can live with the worst case			
Score (✓=2 · ?=1 · ×=0)			

✓ = 2 **?** = 1 × = 0

⚠ Numbers don't decide for you. If the top score disappoints you, pay attention to that — your feelings are information too, not just the score.

Whatever the result, you'll be okay.

You got Plan A
Well done. The degree is a start. Build skills, join clubs, look for internships.

You got Plan B or C
It's a road, not a verdict. Add skills every path rewards: communication, digital skills, teamwork.

It didn't go as hoped
Take a day to feel it. Then list what's still open: another round, private or NU, a diploma, a skills course.

One thing that stays true about me, whatever the result:

_____

THINK LIKE THIS →

একটা ফলাফল তোমার মূল্য ঠিক করে না।

If it feels too heavy, talk to a teacher, a family member or a counsellor you trust.

Your next seven days.

Days 1–2	Write your answers to the questions on pages 6 and 7.
Days 3–4	Pick two fields from pages 8–9. Research them on official sites.
Days 5–6	Read one syllabus. Talk to one senior and one working person.
Day 7	Fill in Plans A, B and C. Show someone you trust.

I'm starting on: _____

My biggest takeaway from this workbook:

_____

Your future isn't decided by one exam day. It's built by many small, careful choices.

ফলাফল যা-ই হোক, সঠিকভাবে ভাবতে শিখলে তুমি ঠিক এগিয়ে যাবে।

Words you'll hear, and where to check.

SSC / HSC
Secondary & Higher Secondary Certificate exams, end of Class 10 and Class 12.

Group
Your subject stream: Science, Commerce, or Humanities/Arts.

GPA
Grade Point Average — your result on a 0–5 scale.

Cut-off mark
The lowest score that got someone in, last time. It moves every year.

Merit list
The ranked list of who gets a seat, by score.

Waiting list
Not admitted yet, but next in line if a seat opens.

Migration
Moving to a more preferred subject/university after admission, if a seat opens.

Viva
A short spoken interview, sometimes part of admission.

Quota
Reserved seats for specific groups set by policy.

Affiliated college
Teaches a university's syllabus (common under National University) but isn't the university itself.

Circular
The official notice with rules, dates and requirements for a specific admission.

Where to check facts, not memorise them

The university's own official website

UGC — **ugc.gov.bd** — the list of approved universities

The admission cluster's own site for your group

BPSC — **bpsc.gov.bd** — for government job circulars later on

Onnoy - অন্বয়

Mymensingh, Bangladesh

You reached the last page. Help someone begin their first.

আপনি শেষ পাতায় পৌঁছেছেন। আরেকজনের নতুন শুরুতে পাশে থাকুন।

If this booklet helped you pause, think, or start a conversation, consider supporting the people behind it. Your kindness helps us make thoughtful resources for more young people and families in Bangladesh.

এই বইটি যদি আপনাকে ভাবতে বা নতুন কথোপকথন শুরু করতে সাহায্য করে থাকে, অন্বয়ের পাশে থাকুন। আপনার সহায়তা আরও তরুণ ও পরিবারের জন্য এমন উপকরণ তৈরি করতে আমাদের শক্তি জোগাবে।
